

Ruslan Vorontsov

Senior Frontend Engineer

6+ years building corporate web applications, CMS products and B2B platforms with Vue, TypeScript, scalable architecture and practical test automation. My background combines hands-on Vue and TypeScript development, architecture decisions, migrations from legacy stacks, testing processes and close work with analysts and QA.

Key achievements

Acted as technical lead on 10+ of 25+ projects, defining architecture and module decomposition.

Vue, TypeScript, microfrontends and modular systems built for independent team delivery.

Migration work across legacy projects from Webpack to Vite and from Vue 2 to Vue 3, improving local development and release confidence.

Smoke and E2E test coverage that catches regressions before production releases.

Introduced microfrontend architecture, E2E testing with Cypress and common code standards.

Architecture decisions, code standards and close collaboration with analysts and QA.

Hands-on Vue and TypeScript development, architecture decisions, migrations from legacy stacks, testing processes and close work with analysts and QA.

Work experience

Senior Frontend Engineer

Mar 2020 - Present

PROGRAM PRODUCT

Built corporate web applications, admin systems, CMS products and B2B platforms with Vue 3 and TypeScript.

- Acted as technical lead on 10+ of 25+ projects, shaping architecture and module decomposition.
- Introduced microfrontend architecture, E2E testing with Cypress and common code standards.

Stack: Vue.js 3, TypeScript, JavaScript, Vite, Vue Router, Pinia, Vuex, Quasar, DevExtreme, Vitest, Cypress

Frontend Developer

Jan 2020 - Mar 2020

ALTED

Worked on an Angular and DevExtreme web application as an early-career frontend engineer.

- Redesigned existing user interfaces and improved UI behavior.
- Used Angular, TypeScript, CSS, Tailwind and DevExtreme.

Stack: Angular, TypeScript, CSS, Tailwind, DevExtreme

Selected projects

Code-first CMS

SENIOR FRONTEND ENGINEER

A Symfony-bundle CMS with metadata-driven admin sections, dynamic form rendering and Vite-based frontend delivery. New admin sections moved from days of custom frontend work to hours.

Responsibility: UI architecture, Form Builder, dynamic field rendering, client-side validation, Vite library build, CI/CD

OptiFit Workout Tracker

TELEGRAM MINI APP · PET PROJECT

A self-built workout tracking app for strength training, cardio and activity logs, prepared for Telegram Mini Apps and a Capacitor mobile version.

Stack: Vue 3, Quasar, Pinia, Telegram Mini Apps

GitHub: github.com/deepreshion

City and Social Platforms

SENIOR FRONTEND ENGINEER

Infrastructure interfaces for Moscow city services with data-heavy dashboards, filters and tables focused on reliability, accessibility and broad public usage.

Stack: Vue, TypeScript, Cypress, a11y
